

# ALERT

## Parachute Tracker

### Find It Fast!

The Atair Location Electronic Receiver Transmitter (ALERT) can quickly and easily track/monitor equipment or personnel over a large scale area. Its optimal design, discrete size, and extreme durability make it ideal for tracking any equipment, or even people. Say goodbye to lost equipment and money.

### Transmitter

- Small, non-intrusive discrete modules with optional GPS data measure just 1.625" x 0.875" x 0.3125".
- Durable potted design built to withstand extreme high-g shocks and terminal impacts
- Easy to use – can attach to nearly anything
- Water resistant – can survive machine washing
- Easily triggered by removing a miniature magnet from its proximity
- Long battery life – the internal lithium ion battery typically lasts 14 days once initiated
- Conveniently recharged via a small charging port
- Signal encoding provides individual frequency ID, optional GPS data
- Discrete, flexible, kink-resistant nitinol antenna can be completely integrated and concealed – only 14.5" long with a 0.042"  $\varnothing$
- No license required

Actual Width

### Receiver

- Water resistant
- Hand-held/pocket size
- Extremely rugged
- Unique ID system to quickly identify/monitor single or many individual beacons simultaneously of all transmitters displayed on screen
- Receiver batteries last 45 hours on a single charge
- Quick charger for lithium ion battery pack
- High sensitivity – designed and tested to exceed industry standard for maximum range
